SUMMARY

Java Full Stack Developer fresher with hands-on experience in building end-to-end web applications using Java, Spring Boot, React, and MySQL. Worked on real-world projects including Solar Solutions and Service Management platforms with frontend–backend integration. Strong in object-oriented programming, REST API development, and building responsive user interfaces with clean, maintainable code.

PROJECTS

- **Solar Solutions Web Application** – Developed an end-to-end solar solutions web application using React for the frontend and Spring Boot with Java for backend REST APIs, enabling real-time cost estimation, ROI, and savings calculation with database integration.

- **Service Management Platform** – Built a service management web application with dynamic user interfaces using HTML, CSS, and JavaScript, and implemented backend logic with Java and Spring Boot to handle service listings and CRUD operations.

- **Personal Expense Tracker using Java (OOP + File Handling)** – Developed a CLI application to track and analyze daily expenses using Local Date, Collections and CSV-based persistence. Added functionalities such as CRUD operations, authentication and monthly summary generation.

- **Soil Nutrient Analysis System** – Developed a low-cost soil nutrient analysis system by processing sensor data through a Java application to analyze soil nutrients (N, P, K) for agricultural insights.
